SUPERIOR HARDWARE

- Used for hinges, latch plates and handles.
- Gliding and wear resistant due to Sintered Metal.
- Adjustable hinges.

COMPARISON TO COMPETITORS

While some competitors use a plastic hinge hardware, **Access** uses a heavy-duty galvanized steel plate for hinge hardware.

Sintered metal inserts are known for their superior durability and glide properties. We use a better solution than a plastic which some competitors use.

Access latch plates include additional hooks to safeguard and create a better connection into the door frame.
